

Probation Violation Program: Case Processing Reforms

Problem:

- In total, 29% of population was incarcerated for a probation technical violation.
- Length of stay pre-implementation = 99 days.
- Population included a disproportionate number of racial and ethnic minorities.
- Opioid epidemic and few resources for women.

Program Model:

- Cooperative plan with Missouri Probation and Parole.
- **Intervention:**
- Fast track the probation violation hearing phase to less than 10 days.
- Provide comprehensive treatment services

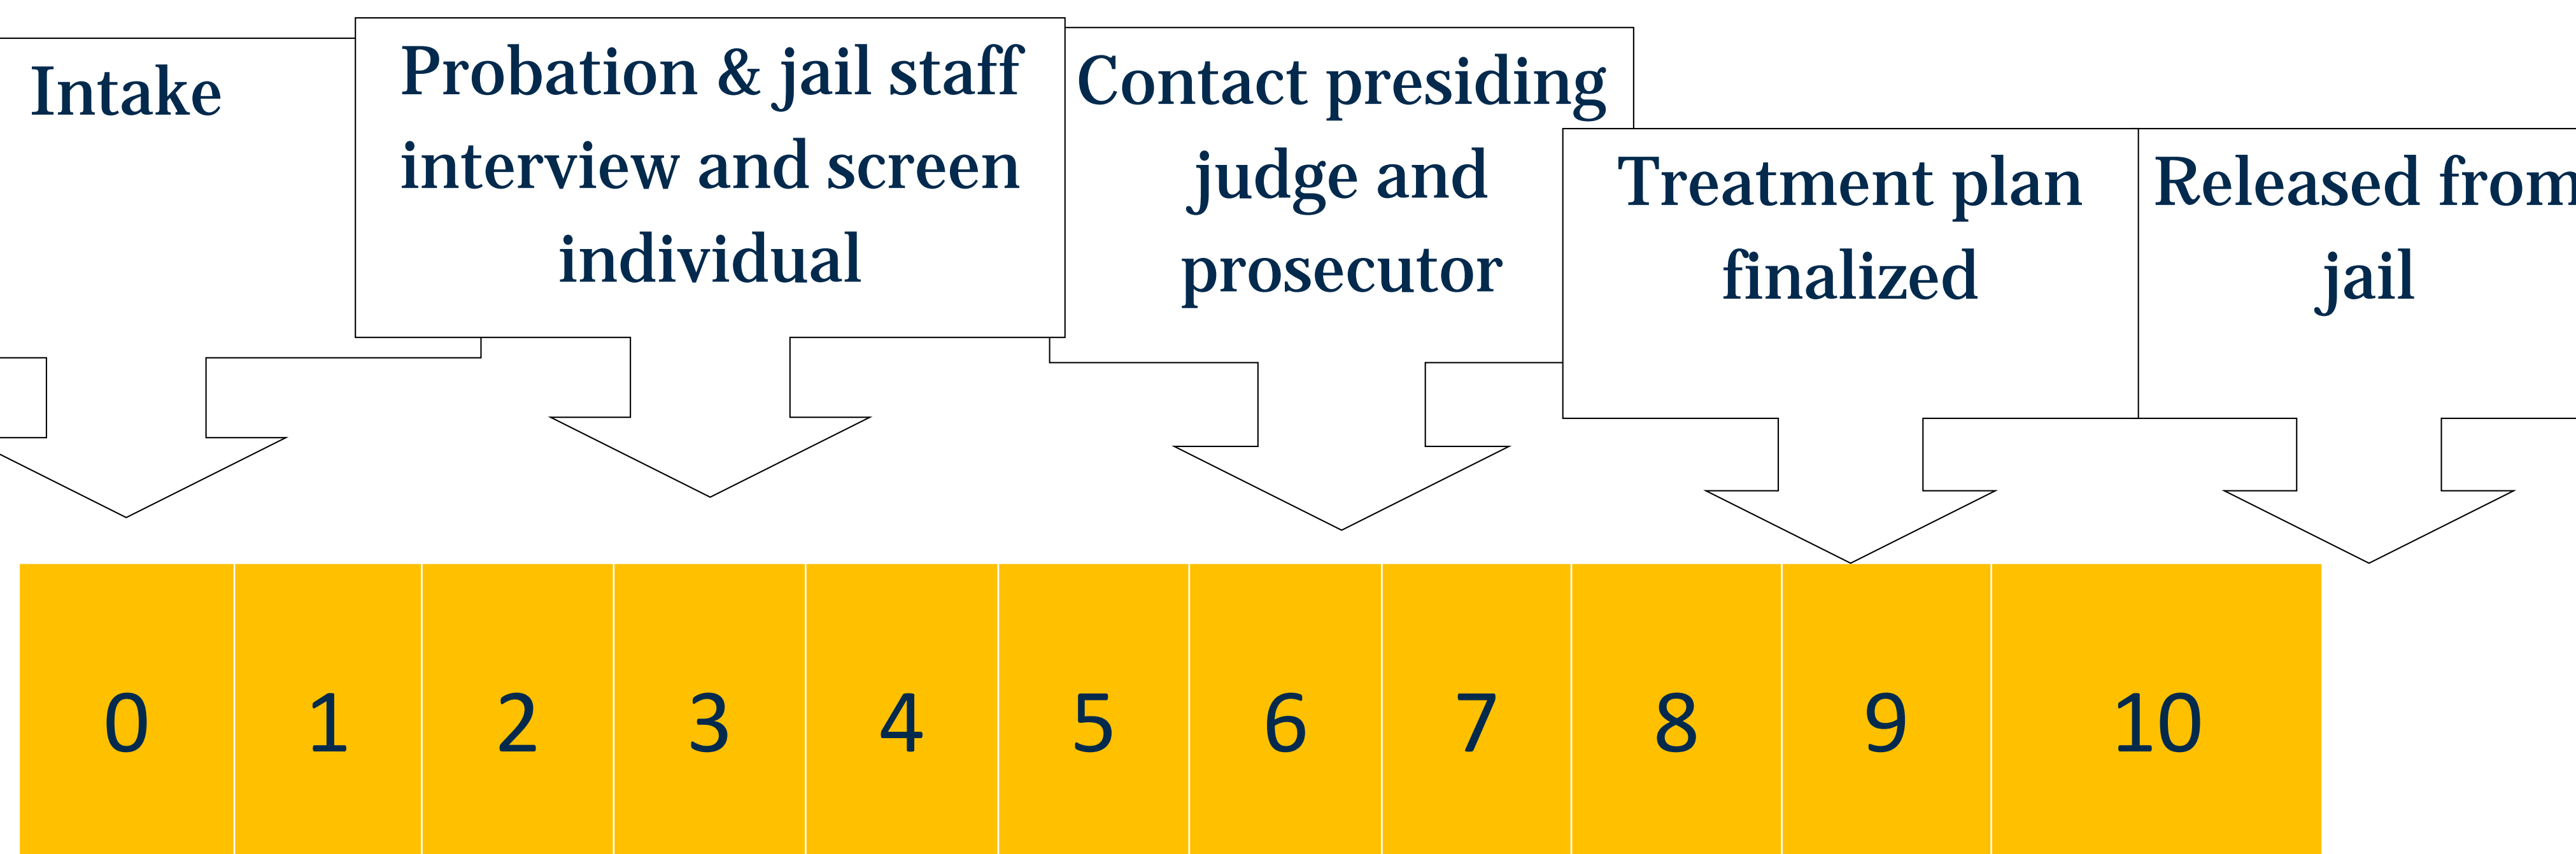

Outcomes:

- Enrolled 450 individuals in the program
- Less than 5% of the population has been returned for a new crime.
- Eliminated differences in length of stay by race.
- 5% decline in average daily population in the past two years.

LENGTH OF STAY FOR INDIVIDUALS DETAINED ON A PROBATION VIOLATION (DAYS)

PROBATION VIOLATION PROBATION (% OF TOTAL POPULATION)

Lessons Learned/Next Steps:

- Use incentives to maintain client engagement.
- Address readiness for treatment with cognitive behavioral treatment.
- Reduce case processing time with new population review team.
