

Transparency: informing need, finding alternatives

Problem

Limited access to corrections data and resources for analysis leads to limited understanding of who is in jail & why

Intervention

- **Operational dashboard** to understand the makeup of the currently housed population
- **Historical dashboard** to understand aggregate trends in jail population

Next steps

- **Public dashboard** to help community groups and researchers understand corrections in St. Louis
- **Expand** to other jurisdictions using the same data provider (starting with St. Louis County, an SJC Implementation Site)
